IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A reflector lamp with a light source ~~(22)~~, ~~a main or secondary reflector (12)~~, a neck portion extending from said main reflector, and at least one primary reflector (25) which is ~~provided for~~ configured to provide an at least substantial reflection through the light source ~~(22)~~ onto the main reflector ~~(12)~~ of those light portions originating from the light source ~~(22)~~ which propagate in the direction of optically inactivated regions of the main reflector ~~(12)~~ or regions of the main reflector ~~(12)~~ obscured by other objects, wherein at least a portion of said at least one primary reflector is located within said neck portion.

2. (Currently Amended) ~~A~~ The reflector lamp as claimed in claim 1, wherein said optically inactivated regions are formed by a

through passage in the main reflector ~~(12)~~ which is provided for a lamp ~~(2)~~ comprising the light source ~~(22)~~.

3. (Currently Amended) A The reflector lamp as claimed in claim 1, wherein said objects are fastening means, cooling means, ignition means, or other means provided for activating and/or operating the light source ~~(22)~~.

4. (Currently Amended) A The reflector lamp as claimed in claim 1, wherein the primary reflector is formed by an optically reflecting coating ~~(25)~~ which is provided on a surface of a lamp ~~(2)~~ comprising the light source ~~(22)~~.

5. (Currently Amended) A The reflector lamp as claimed in claim 4, wherein the optically reflecting coating ~~(25)~~ is formed by a metal layer or by a plurality of dielectric layers or dichroic filters.

6. (Currently Amended) A The reflector lamp as claimed in claim 1, ~~which comprises further comprising~~ a reflector body ~~(1)~~

with a reflector portion (11) supporting the main reflector, (12) and a said neck portion (13) being configured for introducing a lamp (2) comprising the light source (22), such that the geometric continuation of the main reflector (12) passes through the burner (21) of the lamp (2).

7. (Currently Amended) A The reflector lamp as claimed in claim 1, ~~which comprises further comprising~~ a reflector body (1) with a reflector portion (11) supporting the main reflector, (12) and a said neck portion (13) being configured for introducing a lamp (2) comprising the light source (22), ~~such that the focal distance of the main reflector (12) is smaller than the radius of the burner (21) of the accommodated lamp (2).~~

8. (Currently Amended) A The reflector lamp as claimed in claim 1, wherein the light source (22) is an arc discharge in a high-pressure gas discharge lamp (2).

9. (Previously Presented) A projection system with at least one reflector lamp as claimed in claim 1.

PATENT

Serial No. 10/507,182

Amendment in Reply to Office Action mailed on December 12, 2005

10.(New) A lamp comprising:
a discharge vessel configured to sustain a discharge;
a vessel reflector at least partially covering said discharge vessel;
a reflection portion covered with a further reflector; and
a neck portion extending from said reflection portion;
wherein at least a portion of said discharge vessel is located within said neck portion.

11.(New) The lamp of claim 10, wherein at least a portion of said vessel reflector is located within said neck portion.

12.(New) The lamp of claim 10, wherein a geometric continuation of the further reflector passes through the discharge vessel.

13.(New) A lamp comprising:
an envelope configured to include a light source;
an envelope reflector at least partially covering said

envelope;

a reflection portion covered with a further reflector; and
a neck portion extending from said reflection portion;
wherein at least a portion of said discharge vessel is located
within said neck portion.

14. (New) The lamp of claim 13, wherein at least a portion of
said envelope reflector is located within said neck portion.

15. (New) The lamp of claim 13, wherein a geometric
continuation of the further reflector passes through the envelope.
